# San Pablo Catholic University (UCSP) Undergraduate Program in Computer Science SILABO

# CS271. Databases I (Mandatory)

:	Ciencia de la Computación
:	CS271. Databases I
:	4 <sup>to</sup> Semestre.
:	CS1D3. Abstract Algebra. $(3^{rd}$ Sem)
:	Mandatory
:	Virtual
:	2 HT; 4 HL;
:	4
	:

### 2. Professors

#### Lecturer

- Regina Paola Ticona Herrera <rticona@ucsp.edu.pe>
  - PhD in Informática, Université de Pau et des Pays de l'Adour UPPA, Francia, 2016.
    - MSc in Dirección de Empresas, Universidad de Mondragón, España, 2006.

#### 3. Course foundation

Information management (IM) plays a major role in almost all areas where computers are used. This area includes the capture, digitization, representation, organization, transformation and presentation of information; Algorithms to improve the efficiency and effectiveness of accessing and updating stored information, data modeling and abstraction, and physical file storage techniques. It also covers information security, privacy, integrity and protection in a shared environment. Students need to be able to develop conceptual and physical data models, determine which (IM) methods and techniques are appropriate for a given problem, and be able to select and implement an appropriate IM solution that reflects all applicable restrictions, including Scalability and usability.

#### 4. Summary

1. Database Systems 2. Data Modeling 3. Indexing 4. Relational Databases 5. Query Languages

#### 5. Generales Goals

- That the student learn to represent information in a database prioritizing the efficiency in the recovery of the same.
- That the student learn the fundamental concepts of the management of databases. This includes the design of databases, database languages and the realization of databases.
- Discuss the database model with the base in relational algebra, relational calculus and the study of SQL statements.

#### 6. Contribution to Outcomes

This discipline contributes to the achievement of the following outcomes:

- b) An ability to design and conduct experiments, as well as to analyze and interpret data. (Usage)
- d) An ability to function on multidisciplinary teams. (Usage)
- e) Understand correctly the professional, ethical, legal, security and social implications of the profession. (Usage)
- i) An ability to use the techniques, skills, and modern computing tools necessary for computing practice. (Assessment)
- j) Apply the mathematical basis, principles of algorithms and the theory of Computer Science in the modeling and design of computational systems in such a way as to demonstrate understanding of the equilibrium points involved in the chosen option. (Assessment)

### 7. Content

Competences: b,d,i,j		
Content	Generales Goals	
<ul> <li>Approaches to and evolution of database systems</li> <li>Components of database systems</li> <li>Design of core DBMS functions (e.g., query mechanisms, transaction management, buffer management, access methods)</li> <li>Database architecture and data independence</li> <li>Use of a declarative query language</li> <li>Systems supporting structured and/or stream content</li> <li>Approaches for managing large volumes of data (e.g., noSQL database systems, use of MapReduce).</li> </ul>	<ul> <li>Explain the characteristics that distinguish the database approach from the approach of program ming with data files [Usage]</li> <li>Describe the most common designs for core database system components including the query optimized query executor, storage manager, access method and transaction processor [Usage]</li> <li>Cite the basic goals, functions, and models of database systems [Usage]</li> <li>Describe the components of a database system and give examples of their use [Usage]</li> <li>Identify major DBMS functions and describe the role in a database system [Usage]</li> <li>Explain the concept of data independence and in importance in a database system [Usage]</li> <li>Use a declarative query language to elicit information from a database [Usage]</li> <li>Describe facilities that datatbases provide supporting structures and/or stream (sequence) data, entert [Usage]</li> <li>Describe major approaches to storing and processing large volumes of data [Usage]</li> </ul>	

Competences: b,d,i,j		
Content	Generales Goals	
<ul> <li>Data modeling</li> <li>Conceptual models (e.g., entity-relationship, UML diagrams)</li> </ul>	<ul> <li>Compare and contrast appropriate data models, in cluding internal structures, for different types of dat [Usage]</li> <li>Describe concepts in modeling notation (eg, Entity)</li> </ul>	
<ul><li>Spreadsheet models</li><li>Relational data models</li></ul>	Relation Diagrams or UML) and how they would used [Usage]	
• Object-oriented models	• Define the fundamental terminology used in the r lational data model [Usage]	
• Semi-structured data model (expressed using DTD or XML Schema, for example)	• Describe the basic principles of the relational da model [Usage]	
	• Apply the modeling concepts and notation of the relational data model [Usage]	
	• Describe the main concepts of the OO model sur as object identity, type constructors, encapsulatio inheritance, polymorphism, and versioning [Usage	
	• Describe the differences between relational and sem structured data models [Usage]	
	• Give a semi-structured equivalent (eg, in DTD - XML Schema) for a given relational schema [Usag	

Readings: Simsion and Witt (2004), Elmasri and Navathe (2004), Korth and Silberschatz (2002)

<b>UNIT 3:</b>	Indexing	(4)

Competences: b,d,i		
Content	Generales Goals	
<ul> <li>The impact of indices on query performance</li> <li>The basic structure of an index</li> <li>Keeping a buffer of data in memory</li> <li>Creating indexes with SQL</li> <li>Indexing text</li> <li>Indexing the web (e.g., web crawling)</li> </ul>	<ul> <li>Generates croats</li> <li>Generate an index file for a collection of resources [Usage]</li> <li>Explain the role of an inverted index in locating a document in a collection [Usage]</li> <li>Explain how stemming and stop words affect indexing [Usage]</li> <li>Identify appropriate indices for given relational schema and query set [Usage]</li> <li>Estimate time to retrieve information, when indices are used compared to when they are not used [Usage]</li> <li>Describe key challenges in web crawling, eg, detecting duplicate documents, determining the crawling frontier [Usage]</li> </ul>	
<b>Readings:</b> Whitehorn and Marklyn (2001), Ramakrishn C.J (2011), Korth and Silberschatz (2002)	an and Gehrke (2003), Emil Eifrem and Robinson (2015),	

ntent	Generales Goals
<ul> <li>Mapping conceptual schema to a relational schema</li> <li>Entity and referential integrity</li> <li>Relational algebra and relational calculus</li> <li>Relational Database design</li> <li>Functional dependency</li> <li>Decomposition of a schema; lossless-join and dependency-preservation properties of a decomposition</li> <li>Candidate keys, superkeys, and closure of a set of attributes</li> <li>Normal forms (BCNF)</li> <li>Multi-valued dependency (4NF)</li> <li>Join dependency (PJNF, 5NF)</li> <li>Representation theory</li> </ul>	<ul> <li>Prepare a relational schema from a conceptual model developed using the entity- relationship model [U age]</li> <li>Explain and demonstrate the concepts of entity integrity constraint and referential integrity constraint (including definition of the concept of a foreign kee [Usage]</li> <li>Demonstrate use of the relational algebra operation from mathematical set theory (union, intersection difference, and Cartesian product) and the relational algebra operations developed specifically for relational databases (select (restrict), project, join, and division) [Usage]</li> <li>Write queries in the relational algebra [Usage]</li> <li>Write queries in the tuple relational calculus [Usage]</li> <li>Determine the functional dependency between two or more attributes that are a subset of a relation [Usage]</li> <li>Connect constraints expressed as primary key and foreign key, with functional dependencies [Usage]</li> <li>Compute the closure of a set of attributes und given functional dependencies [Usage]</li> <li>Determine whether a set of attributes form a sperkey and/or candidate key for a relation with give functional dependencies [Usage]</li> <li>Evaluate a proposed decomposition, to say wheth it has lossless-join and dependency-preservation [U age]</li> <li>Describe the properties of BCNF, PJNF, 5NF [U age]</li> <li>Explain the impact of normalization on the efficient of database operations especially query optimization [Usage]</li> </ul>

Competences: b,d,i,j				
Content	Generales Goals			
<ul> <li>Overview of database languages</li> <li>SQL (data definition, query formulation, update sublanguage, constraints, integrity)</li> <li>Selections</li> <li>Projections</li> <li>Select-project-join</li> <li>Aggregates and group-by</li> <li>Subqueries</li> <li>QBE and 4th-generation environments</li> <li>Different ways to invoke non-procedural queries in conventional languages</li> <li>Introduction to other major query languages (e.g., XPATH, SPARQL)</li> <li>Stored procedures</li> </ul>	<ul> <li>Create a relational database schema in SQL that in corporates key, entity integrity, and referential in tegrity constraints [Usage]</li> <li>Use SQL to create tables and retrieve (SELECT information from a database [Usage]</li> <li>Evaluate a set of query processing strategies and select the optimal strategy [Usage]</li> <li>Create a non-procedural query by filling in template of relations to construct an example of the desire query result [Usage]</li> <li>Embed object-oriented queries into a stand-alon language such as C++ or Java (eg, SELECT Co Method() FROM Object) [Usage]</li> <li>Write a stored procedure that deals with parameter and has some control flow, to provide a given functionality [Usage]</li> </ul>			

Readings: Dietrich (2001), Elmasri and Navathe (2004), Celko (2005), Korth and Silberschatz (2002)

8. Methodology

El profesor del curso presentará clases teóricas de los temas señalados en el programa propiciando la intervención de los alumnos.

El profesor del curso presentará demostraciones para fundamentar clases teóricas.

El profesor y los alumnos realizarán prácticas

Los alumnos deberán asistir a clase habiendo leído lo que el profesor va a presentar. De esta manera se facilitará la comprensión y los estudiantes estarán en mejores condiciones de hacer consultas en clase.

9. Assessment

Continuous Assessment 1 : 20 %

Partial Exam : 30 %

Continuous Assessment 2 : 20 %

Final exam : 30%
