San Pablo Catholic University (UCSP) Undergraduate Program in Computer Science SILABO

Universidad Católica San Pablo 2021-I

CS3I1. Computer Security (Mandatory)

1. General information

1.1 School : Ciencia de la Computación 1.2 Course : CS3I1. Computer Security

1.3 Semester : 8^{vo} Semestre.

1.4 Prerrequisites : CS231. Networking and Communication. (7^{th} Sem)

1.5 Type of course : Mandatory 1.6 Learning modality : Virtual

1.7 Horas : 1 HT; 2 HP; 2 HL;

1.8 Credits : 3

2. Professors

3. Course foundation

Nowadays, information is one of the most valuable assets in any organization. This course is oriented to be able to provide the student with the security elements oriented to protect the Information of the organization and mainly to be able to foresee the possible problems related to this heading. This subject involves the development of a preventive attitude on the part of the student in all areas related to software development.

4. Summary

- 1. Foundational Concepts in Security 2. Principles of Secure Design 3. Defensive Programming 4. Threats and Attacks
- 5. Network Security 6. Cryptography 7. Web Security 8. Platform Security 9. Digital Forensics 10. Secure Software Engineering

5. Generales Goals

- Discuss at an intermediate intermediate level the fundamentals of Computer Security.
- Provide different aspects of the malicious code.
- That the student knows the concepts of cryptography and security in computer networks.
- Discuss and analyze together with the student the aspects of Internet Security.

6. Contribution to Outcomes

This discipline contributes to the achievement of the following outcomes:

- a) An ability to apply knowledge of mathematics, science. (Usage)
- b) An ability to design and conduct experiments, as well as to analyze and interpret data. (Assessment)
- c) An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. (Assessment)
- g) The broad education necessary to understand the impact of computing solutions in a global, economic, environmental, and societal context. (Assessment)
- h) A recognition of the need for, and an ability to engage in life-long learning. (Usage)
- i) An ability to use the techniques, skills, and modern computing tools necessary for computing practice. (Assessment)
- j) Apply the mathematical basis, principles of algorithms and the theory of Computer Science in the modeling and design of computational systems in such a way as to demonstrate understanding of the equilibrium points involved in the chosen option. (Usage)

7. Content

UNIT 1: Foundational Concepts in Security (25)		
Competences: a,g		
Content	Generales Goals	
 CIA (Confidentiality, Integrity, Availability) Concepts of risk, threats, vulnerabilities, and attack vectors Authentication and authorization, access control (mandatory vs. discretionary) Concept of trust and trustworthiness Ethics (responsible disclosure) 	 Analyze the tradeoffs of balancing key security properties (Confidentiality, Integrity, Availability) [Familiarity] Describe the concepts of risk, threats, vulnerabilities and attack vectors (including the fact that there is no such thing as perfect security) [Familiarity] Explain the concepts of authentication, authorization, access control [Familiarity] Explain the concept of trust and trustworthiness [Familiarity] Recognize that there are important ethical issues to consider in computer security, including ethical issues associated with fixing or not fixing vulnerabilities and disclosing or not disclosing vulnerabilities [Familiarity] 	
Readings: W and L (2014)		

Competences: a,g,h			
ontent	Generales Goals		
 Least privilege and isolation Fail-safe defaults Open design End-to-end security Defense in depth (e.g., defensive programming, layered defense) Security by design Tensions between security and other design goals Complete mediation Use of vetted security components Economy of mechanism (reducing trusted computing base, minimize attack surface) Usable security Security composability Prevention, detection, and deterrence 	 Describe the principle of least privilege and isolatic as applied to system design [Familiarity] Summarize the principle of fail-safe and deny-by default [Familiarity] Discuss the implications of relying on open design of the secrecy of design for security. [Familiarity] Explain the goals of end-to-end data security [Familiarity] Discuss the benefits of having multiple layers of defenses [Familiarity] For each stage in the lifecycle of a product, describe what security considerations should be evaluated [Familiarity] Describe the cost and tradeoffs associated with designing security into a product [Familiarity] Describe the concept of mediation and the princip of complete mediation [Familiarity] Be aware of standard components for security operations, instead of re-inventing fundamentals operations [Familiarity] Explain the concept of trusted computing including trusted computing base and attack surface and the principle of minimizing trusted computing base [Familiarity] Discuss the importance of usability in security medianism design [Familiarity] Describe security issues that arise at boundaries between multiple components. [Familiarity] 		

Readings: W and L (2014)

ompetences: b,i	Generales Goals
JANUARU .	Generales Goals
 Input validation and data sanitization Choice of programming language and type-safe languages 	• Explain why input validation and data sanitization is necessary in the face of adversarial control of the input channel. [Usage]
• Examples of input validation and data sanitization errors	 Explain why you might choose to develop a progra in a type-safe language like Java, in contrast to a unsafe programming language like C/C++ [Usage
- Buffer overflows	• Classify common input validation errors, and wri
- Integer errors	correct input validation code [Usage]
- SQL injection	• Demonstrate using a high-level programming la
- XSS vulnerability	guage how to prevent a race condition from occurring
• Race conditions	and how to handle an exception [Usage]
Correct handling of exceptions and unexpected behaviors	• Demonstrate the identification and graceful handling of error conditions [Familiarity]
• Correct usage of third-party components	• Explain the risks with misusing interfaces with thir party code and how to correctly use third-party code.
• Effectively deploying security updates	[Familiarity]
• Information flow control	• Discuss the need to update software to fix securi vulnerabilities and the lifecycle management of the security of the securi
• Correctly generating randomness for security purposes	fix [Familiarity]
• Mechanisms for detecting and mitigating input and data sanitization errors	
• Fuzzing	
• Static analysis and dynamic analysis	
• Program verification	
• Operating system support (e.g., address space randomization, canaries)	
• Hardware support (e.g, DEP, TPM)	
eadings: W and L (2014)	

UNIT 4: Threats and Attacks (25) Competences: b,i Content Generales Goals • Attacker goals, capabilities, and motivations (such as • Describe likely attacker types against a particular underground economy, digital espionage, cyberwarsystem [Familiarity] fare, insider threats, hacktivism, advanced persistent • Discuss the limitations of malware countermeasures threats) (eg, signature-based detection, behavioral detection) • Examples of malware (e.g., viruses, worms, spyware, [Familiarity] botnets, Trojan horses or rootkits) • Identify instances of social engineering attacks and Denial of Service attacks [Familiarity] • Denial of Service (DoS) and Distributed Denial of Service (DDoS) • Discuss how Denial of Service attacks can be identi-• Social engineering (e.g., phishing) fied and mitigated [Familiarity] • Attacks on privacy and anonymity • Describe risks to privacy and anonymity in commonly used applications [Familiarity] • Malware/unwanted communication such as covert channels and steganography • Discuss the concepts of covert channels and other data leakage procedures [Familiarity] Readings: W and L (2014)

UNIT 5: Network Security (25)			
Competences: b,i			
Content	Generales Goals		
 Network specific threats and attack types (e.g., denial of service, spoofing, sniffing and traffic redirection, man-in-the-middle, message integrity attacks, routing attacks, and traffic analysis) Use of cryptography for data and network security Architectures for secure networks (e.g., secure channels, secure routing protocols, secure DNS, VPNs, anonymous communication protocols, isolation) Defense mechanisms and countermeasures (e.g., network monitoring, intrusion detection, firewalls, spoofing and DoS protection, honeypots, tracebacks) Security for wireless, cellular networks Other non-wired networks (e.g., ad hoc, sensor, and vehicular networks) Censorship resistance Operational network security management (e.g., configure network access control) Readings: W and L (2014)	 Describe the different categories of network threats and attacks [Familiarity] Describe the architecture for public and private key cryptography and how PKI supports network security [Familiarity] Describe virtues and limitations of security technologies at each layer of the network stack [Familiarity] Identify the appropriate defense mechanism(s) and its limitations given a network threat [Usage] 		
2011)			

UNIT 6: Cryptography (25) Competences: b,i Content Generales Goals • Basic Cryptography Terminology covering notions • Describe the purpose of Cryptography and list ways pertaining to the different (communication) partit is used in data communications [Familiarity] ners, secure/unsecure channel, attackers and their • Define the following terms: Cipher, Cryptanalysis, capabilities, encryption, decryption, keys and their Cryptographic Algorithm, and Cryptology and decharacteristics, signatures scribe the two basic methods (ciphers) for transform-• Cipher types (e.g., Caesar cipher, affine cipher) toing plain text in cipher text [Familiarity] gether with typical attack methods such as frequency • Discuss the importance of prime numbers in crypanalysis tography and explain their use in cryptographic al-• Public Key Infrastructure support for digital signagorithms [Familiarity] ture and encryption and its challenges • Illustrate how to measure entropy and how to gen-• Symmetric key cryptography erate cryptographic randomness [Usage] - Perfect secrecy and the one time pad • Use public-key primitives and their applications [Usage - Modes of operation for semantic security and authenticated encryption (e.g., encrypt-then-• Explain how key exchange protocols work and how MAC, OCB, GCM) they fail [Familiarity] - Message integrity (e.g., CMAC, HMAC) • Discuss cryptographic protocols and their properties • Public key cryptography: [Familiarity] - Trapdoor permutation, e.g., RSA - Public key encryption, e.g., RSA encryption, EI Gamal encryption - Digital signatures - Public-key infrastructure (PKI) and certificates - Hardness assumptions, e.g., Diffie-Hellman, integer factoring • Authenticated key exchange protocols, e.g., TLS • Cryptographic primitives: - pseudo-random generators and stream ciphers - block ciphers (pseudo-random permutations), e.g., AES - pseudo-random functions - hash functions, e.g., SHA2, collision resistance - message authentication codes - key derivations functions

Readings: W and L (2014)

Competences: a,g			
Content	Generales Goals		
 Web security model Browser security model including same-origin policy Client-server trust boundaries, e.g., cannot rely on secure execution in the client Session management, authentication Single sign-on HTTPS and certificates Application vulnerabilities and defenses SQL injection XSS CSRF Client-side security Cookies security policy HTTP security extensions, e.g. HSTS Plugins, extensions, and web apps Web user tracking Server-side security tools, e.g. Web Application Firewalls (WAFs) and fuzzers 	 Describe the browser security model including same origin policy and threat models in web security [Familiarity] Discuss the concept of web sessions, secure communication channels such as TLS and importance of secure certificates, authentication including single sign-on such as OAuth and SAML [Familiarity] Investigate common types of vulnerabilities and attacks in web applications, and defenses against them [Familiarity] Use client-side security capabilities [Usage] 		
Readings: W and L (2014)			

UNIT 8: Platform Security (25)			
Competences: b,i			
Content	Generales Goals		
 Code integrity and code signing Secure boot, measured boot, and root of trust Attestation TPM and secure co-processors Security threats from peripherals, e.g., DMA, IOMMU Physical attacks: hardware Trojans, memory probes, cold boot attacks Security of embedded devices, e.g., medical devices, cars Trusted path 	 Explain the concept of code integrity and code signing and the scope it applies to [Familiarity] Discuss the concept of root of trust and the process of secure boot and secure loading [Familiarity] Describe the mechanism of remote attestation of system integrity [Familiarity] Summarize the goals and key primitives of TPM [Familiarity] Identify the threats of plugging peripherals into a device [Familiarity] Identify physical attacks and countermeasures [Familiarity] Identify attacks on non-PC hardware platforms [Familiarity] Discuss the concept and importance of trusted path [Familiarity] 		
Readings: W and L (2014)			

UNIT 9: Digital Forensics (25) Competences: a,g Content Generales Goals • Basic Principles and methodologies for digital foren-• Describe what is a Digital Investigation is, the sources of digital evidence, and the limitations of forensics [Familiarity] • Design systems with forensic needs in mind • Explain how to design software to support forensics • Rules of Evidence - general concepts and differences [Familiarity] between jurisdictions and Chain of Custody • Describe the legal requirements for use of seized data • Search and Seizure of evidence: legal and procedural [Familiarity] requirements • Describe the process of evidence seizure from the • Digital Evidence methods and standards time when the requirement was identified to the disposition of the data [Familiarity] • Techniques and standards for Preservation of Data • Describe how data collection is accomplished and the • Legal and Reporting Issues including working as an proper storage of the original and forensics copy [Faexpert witness miliarity] • OS/File System Forensics • Conduct data collection on a hard drive [Usage] • Application Forensics • Describe a person's responsibility and liability while Web Forensics testifying as a forensics examiner [Familiarity] Network Forensics • Recover data based on a given search term from an imaged system [Usage] • Mobile Device Forensics • Reconstruct application history from application ar-• Computer/network/system attacks tifacts [Familiarity] • Attack detection and investigation • Reconstruct web browsing history from web artifacts [Familiarity] Anti-forensics • Capture and interpret network traffic [Familiarity] • Discuss the challenges associated with mobile device forensics [Familiarity] Readings: W and L (2014)

recaamgs.	• •	and L	(2011)	

UNIT 10: Secure Software Engineering (25)			
Competences: a,c,g,i			
Content	Generales Goals		
 Building security into the software development lifecycle Secure design principles and patterns Secure software specifications and requirements Secure software development practices Secure testing- the process of testing that security requirements are met (including static and dynamic analysis). 	 Describe the requirements for integrating security into the SDL [Familiarity] Apply the concepts of the Design Principles for Protection Mechanisms, the Principles for Software Security (Viega and McGraw), and the Principles for Secure Design (Morrie Gasser) on a software development project [Familiarity] Develop specifications for a software development effort that fully specify functional requirements and identifies the expected execution paths [Familiarity] 		
Readings: W and L (2014)			

8. Methodology

El profesor del curso presentará clases teóricas de los temas señalados en el programa propiciando la intervención de los alumnos.

El profesor del curso presentará demostraciones para fundamentar clases teóricas.

El profesor y los alumnos realizarán prácticas

Los alumnos deberán asistir a clase habiendo leído lo que el profesor va a presentar. De esta manera se facilitará la comprensión y los estudiantes estarán en mejores condiciones de hacer consultas en clase.

9. Assessment

Continuous Assessment 1 : 20 %

Partial Exam : 30 %

Continuous Assessment 2 : 20 %

Final exam : 30 %
