San Pablo Catholic University (UCSP) **Undergraduate** Program in **Computer Science** SILABO

CB309. Bioinformatics (Elective)

2. Professors

3. Course foundation

The use of computational methods in the biological sciences has become one of the key tools for the field of molecular biology, being a fundamental part of research in this area.

In Molecular Biology, there are several applications that involve both DNA, protein analysis or sequencing of the human genome, which depend on computational methods. Many of these problems are really complex and deal with large data sets.

This course can be used to see concrete use cases of several areas of knowledge of Computer Science such as Programming Languages (PL), Algorithms and Complexity (AL), Probabilities and Statistics, Information Management (IM), Intelligent Systems (IS).

4. Summary

- 1. Introduction to Molecular Biology 2. Sequence Comparison 3. Phylogenetic Trees 4. DNA Sequence Assembling
- 5. Secondary and tertiary structures 6. Probabilistic Models in Molecular Biology

5. Generales Goals

- That the student has a solid knowledge of molecular biological problems that challenge computing.
- That the student is able to abstract the essence of the various biological problems to pose solutions using their knowledge of Computer Science

6. Contribution to Outcomes

This discipline contributes to the achievement of the following outcomes:

a) An ability to apply knowledge of mathematics, science. (Usage)

b) An ability to design and conduct experiments, as well as to analyze and interpret data. (Assessment)

1) Develop principles research in the area of computing with levels of international competitiveness. (Usage)

7. Content

▲	Competences:		
Content	Generales Goals		
 Review of organic chemistry: molecules and macro-molecules, sugars, nucleic acids, nucleotides, RNA, DNA, proteins, amino acids and levels of structure in proteins. The Dogma of Life: From DNA to Proteins, Transcription, Translation, Protein Synthesis. Genome study: Maps and sequences, specific techniques 	 Achive a general knowledge of the most important topics in Molecular Biology. [Familiarity] Understand that biological problems are a challenge to the computational world. [Assessment] 		

Competences:		
Content	Generales Goals	
 Sequences of nucleotides and amino acid sequences. Sequence alignment, paired alignment problem, exhaustive search, Dynamic programming, global alignment, local alignment, gaps penalty Comparison of multiple sequences: sum of pairs, complexity analysis by dynamic programming, alignment heuristics, star algorithm, progressive alignment algorithms. 	 Understand and solve the problem of aligning a pair of sequences. [Usage] Understand and solve the problem of multiple se quence alignment. [Usage] Know the various algorithms for aligning existing se quences in the literature . [Familiarity] 	

Readings: Clote and Backofen (2000), Setubal and Meidanis (1997), Pevzner (2000)

Competences:	
Content	Generales Goals
 Phylogeny: Introduction and phylogenetic relations Phylogenetic trees: definition, type of trees, problem of search and reconstruction of trees Reconstruction methods: parsimony methods, distance methods, maximum likelihood methods, confidence of reconstructed trees 	 Understand the concept of phylogeny, phylogenetic trees and the methodological difference between biology and molecular biology. [Familiarity] Understand the problem of the reconstruction of phylogenetic trees, to know and apply the main algorithms for the reconstruction of phylogenetic trees. [Assessment]

Competences:		
Content	Generales Goals	
 Biological basis: ideal case, difficulties, alternative methods for DNA sequencing Formal Assembly Models: Shortest Common Super- string, Reconstruction, Multicontig 	 Understand the computational challenge of the Sequence Assembly problem. [Familiarity] Understand the principle of formal model for assembly. [Assessment] 	
• Algorithms for sequence assembly: representation of overlaps, paths to create superstrings, voracious algorithm, acyclic graphs.	• Know the main heuristics for the problem of assembjale of DNA sequences[Usage]	
• Assembly heuristics: search for overlays, ordering fragments, alignments and consensus.		

Competences:		
Content	Generales Goals	
 Molecular structures: primary, secondary, tertiary, quaternary. Prediction of secondary structures of RNA: formal model, pair energy, structures with independent bases, solution with Dynamic Programming, structures with loops. 	 Know the protein structures and the necessity of computational methods for the prediction of the geometry. [Familiarity] Know the algorithms for solving prediction problem of secondary structures RNA, and structures in proteins. [Assessment] 	
• <i>Protein folding</i> : Estructuras en proteinas, problema de protein folding.		
• <i>Protein Threading</i> : Definitions, Branch Bound Algorithm, Branch Bound for protein threading.		
• Structural Alignment: Definitions, DALI algorithm		

Competences:		
Content	Generales Goals	
 Probability: Random Variables, Markov Chains, Metropoli-Hasting Algorithm, Markov Random Fields, and Gibbs Sampler, Maximum Likelihood. Hidden Markov Models (HMM), parameter estima- tion, Viterbi algorithm and Baul-Welch method, Ap- plication in paired and multiple alignments, Mo- tifs detection in proteins, in eukaryotic DNA, in se- quences families. Probabilistic phylogeny: probabilistic models of evolution, likelihood of alignments, likelihood for inference, comparison of probailistic and non- probabilistic methods 	 Review concepts of Probabilistic Models and under stand their importance in Computational Molecula Biology. [Assessment] Know and apply Hidden Markov Models for variou analyzes in Molecular Biology [Usage] Know the application of probabilistic models in Phy logeny and to compare them with non-probabilisti models[Assessment] 	
Readings: Durbin et al. (1998), Clote and Backofen (2000), Aluru (2006), Krogh et al. (1994)	
8. Methodology		

El profesor del curso presentará clases teóricas de los temas señalados en el programa propiciando la intervención de los alumnos.

El profesor del curso presentará demostraciones para fundamentar clases teóricas.

El profesor y los alumnos realizarán prácticas

Los alumnos deberán asistir a clase habiendo leído lo que el profesor va a presentar. De esta manera se facilitará la comprensión y los estudiantes estarán en mejores condiciones de hacer consultas en clase.

9. Assessment

Continuous Assessment 1 : 20 %

Partial Exam : 30%

Continuous Assessment 2 : 20 %

Final exam : 30 %
