

**National University of Engineering (UNI)**  
School of Computer Science  
Syllabus 2023-I

**1. COURSE**

CS2S1. Operating systems (Mandatory)

**2. GENERAL INFORMATION**

- 2.1 Course : CS2S1. Operating systems
- 2.2 Semester : 4<sup>to</sup> Semestre.
- 2.3 Credits : 4
- 2.4 Horas : 2 HT; 4 HP;
  
- 2.5 Duration of the period : 16 weeks
- 2.6 Type of course : Mandatory
- 2.7 Learning modality : Blended
- 2.8 Prerequisites : CS221. Computer Systems Architecture. (3<sup>rd</sup> Sem)  
CS221. Computer Systems Architecture. (3<sup>rd</sup> Sem)

**3. PROFESSORS**

Meetings after coordination with the professor

**4. INTRODUCTION TO THE COURSE**

An Operating System (OS) manages the computing resources to complete the execution of multiple applications and their associated processes. This course teaches the design of modern operating systems; and introduces their fundamental concepts covering multiple-program execution, scheduling, memory management, file systems, and security. Also, the course includes programming activities on a minimal operating system to solve problems and extend its functionality. Notice that these activities require much time to complete. However, working on them provides valuable insight into operating systems.

**5. GOALS**

- Study the design of modern operating systems.
- Provide a practical experience by designing and implementing a minimal operating system.

**6. COMPETENCES**

- 1) Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions. (**Assessment**)
- 4) Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles. (**Familiarity**)
- 5) Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline. (**Usage**)
- 6) Apply computer science theory and software development fundamentals to produce computing-based solutions. (**Usage**)
- 7) Develop computational technology for the well-being of all, contributing with human formation, scientific, technological and professional skills to solve social problems of our community. (**Assessment**)

**7. TOPICS**

<b>Unit 1: Overview of Operating Systems (3)</b>	
<b>Competences Expected:</b>	
<b>Topics</b>	<b>Learning Outcomes</b>
<ul style="list-style-type: none"> <li>• Role and purpose of the operating system</li> <li>• Functionality of a typical operating system</li> <li>• Mechanisms to support client-server models.</li> <li>• Design issues (efficiency, robustness, flexibility, portability, security, compatibility)</li> <li>• Influences of security, networking, multimedia, windowing systems</li> </ul>	<ul style="list-style-type: none"> <li>• Explain the objectives and functions of modern operating systems [Familiarity]</li> <li>• Analyze the tradeoffs inherent in operating system design [Assessment]</li> <li>• Describe the functions of a contemporary operating system with respect to convenience, efficiency, and the ability to evolve [Familiarity]</li> <li>• Discuss networked, client-server, distributed operating systems and how they differ from single user operating systems [Familiarity]</li> <li>• Identify potential threats to operating systems and the security features design to guard against them [Familiarity]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

<b>Unit 2: Operating System Principles (6)</b>	
<b>Competences Expected:</b>	
<b>Topics</b>	<b>Learning Outcomes</b>
<ul style="list-style-type: none"> <li>• Operating Systems Structure (monolithic, layered, modular, micro-kernel models)</li> <li>• Abstractions, processes, and resources</li> <li>• Concepts of application program interfaces (APIs)</li> <li>• The evolution of hardware/software techniques and application needs</li> <li>• Device organization</li> <li>• Interrupts: methods and implementations</li> <li>• Concept of user/system state and protection, transition to kernel mode</li> </ul>	<ul style="list-style-type: none"> <li>• Explain the concept of a logical layer [Familiarity]</li> <li>• Explain the benefits of building abstract layers in hierarchical fashion [Familiarity]</li> <li>• Describe the value of APIs and middleware [Familiarity]</li> <li>• Describe how computing resources are used by application software and managed by system software [Familiarity]</li> <li>• Contrast kernel and user mode in an operating system [Assessment]</li> <li>• Discuss the advantages and disadvantages of using interrupt processing [Familiarity]</li> <li>• Explain the use of a device list and driver I/O queue [Familiarity]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

<b>Unit 3: Concurrency (9)</b>	
<b>Competences Expected:</b>	
<b>Topics</b>	<b>Learning Outcomes</b>
<ul style="list-style-type: none"> <li>• States diagrams</li> <li>• Structures (ready list, process control blocks, and so forth)</li> <li>• Dispatching and context switching</li> <li>• The role of interrupts</li> <li>• Managing atomic access to OS objects</li> <li>• Implementing synchronization primitives</li> <li>• Multiprocessor issues (spin-locks, reentrancy)</li> </ul>	<ul style="list-style-type: none"> <li>• Describe the need for concurrency within the framework of an operating system [Familiarity]</li> <li>• Demonstrate the potential run-time problems arising from the concurrent operation of many separate tasks [Usage]</li> <li>• Summarize the range of mechanisms that can be employed at the operating system level to realize concurrent systems and describe the benefits of each [Familiarity]</li> <li>• Explain the different states that a task may pass through and the data structures needed to support the management of many tasks [Familiarity]</li> <li>• Summarize techniques for achieving synchronization in an operating system (eg, describe how to implement a semaphore using OS primitives) [Familiarity]</li> <li>• Describe reasons for using interrupts, dispatching, and context switching to support concurrency in an operating system [Familiarity]</li> <li>• Create state and transition diagrams for simple problem domains [Usage]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

Unit 4: Scheduling and Dispatch (6)	
Competences Expected:	
Topics	Learning Outcomes
<ul style="list-style-type: none"> <li>• Preemptive and non-preemptive scheduling</li> <li>• Schedulers and policies</li> <li>• Processes and threads</li> <li>• Deadlines and real-time issues</li> </ul>	<ul style="list-style-type: none"> <li>• Compare and contrast the common algorithms used for both preemptive and non-preemptive scheduling of tasks in operating systems, such as priority, performance comparison, and fair-share schemes [Assessment]</li> <li>• Describe relationships between scheduling algorithms and application domains [Familiarity]</li> <li>• Discuss the types of processor scheduling such as short-term, medium-term, long-term, and I/O [Familiarity]</li> <li>• Describe the difference between processes and threads [Familiarity]</li> <li>• Compare and contrast static and dynamic approaches to real-time scheduling [Assessment]</li> <li>• Discuss the need for preemption and deadline scheduling [Familiarity]</li> <li>• Identify ways that the logic embodied in scheduling algorithms are applicable to other domains, such as disk I/O, network scheduling, project scheduling, and problems beyond computing [Familiarity]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

Unit 5: Memory Management (6)	
Competences Expected:	
Topics	Learning Outcomes
<ul style="list-style-type: none"> <li>• Review of physical memory and memory management hardware</li> <li>• Working sets and thrashing</li> <li>• Caching</li> </ul>	<ul style="list-style-type: none"> <li>• Explain memory hierarchy and cost-performance trade-offs [Familiarity]</li> <li>• Summarize the principles of virtual memory as applied to caching and paging [Familiarity]</li> <li>• Evaluate the trade-offs in terms of memory size (main memory, cache memory, auxiliary memory) and processor speed [Assessment]</li> <li>• Defend the different ways of allocating memory to tasks, citing the relative merits of each [Familiarity]</li> <li>• Describe the reason for and use of cache memory (performance and proximity, different dimension of how caches complicate isolation and VM abstraction) [Familiarity]</li> <li>• Discuss the concept of thrashing, both in terms of the reasons it occurs and the techniques used to recognize and manage the problem [Familiarity]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

Unit 6: Security and Protection (6)	
Competences Expected:	
Topics	Learning Outcomes
<ul style="list-style-type: none"> <li>• Overview of system security</li> <li>• Policy/mechanism separation</li> <li>• Security methods and devices</li> <li>• Protection, access control, and authentication</li> <li>• Backups</li> </ul>	<ul style="list-style-type: none"> <li>• Articulate the need for protection and security in an OS [Familiarity]</li> <li>• Summarize the features and limitations of an operating system used to provide protection and security [Familiarity]</li> <li>• Explain the mechanisms available in an OS to control access to resources (cross reference IAS/Security Architecture and Systems Administration/Access Control/Configuring systems to operate securely as an IT system) [Familiarity]</li> <li>• Carry out simple system administration tasks according to a security policy, for example creating accounts, setting permissions, applying patches, and arranging for regular backups (cross reference IAS/Security Architecture and Systems Administration ) [Familiarity]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

Unit 7: Virtual Machines (6)	
Competences Expected:	
Topics	Learning Outcomes
<ul style="list-style-type: none"> <li>• Types of virtualization (including Hardware/Software, OS, Server, Service, Network)</li> <li>• Paging and virtual memory</li> <li>• Virtual file systems</li> <li>• Hypervisors</li> <li>• Portable virtualization; emulation vs. isolation</li> <li>• Cost of virtualization</li> </ul>	<ul style="list-style-type: none"> <li>• Explain the concept of virtual memory and how it is realized in hardware and software [Familiarity]</li> <li>• Differentiate emulation and isolation [Familiarity]</li> <li>• Evaluate virtualization trade-offs [Assessment]</li> <li>• Discuss hypervisors and the need for them in conjunction with different types of hypervisors [Familiarity]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

<b>Unit 8: Device Management (6)</b>	
<b>Competences Expected:</b>	
<b>Topics</b>	<b>Learning Outcomes</b>
<ul style="list-style-type: none"> <li>• Characteristics of serial and parallel devices</li> <li>• Abstracting device differences</li> <li>• Buffering strategies</li> <li>• Direct memory access</li> <li>• Recovery from failures</li> </ul>	<ul style="list-style-type: none"> <li>• Explain the key difference between serial and parallel devices and identify the conditions in which each is appropriate [Familiarity]</li> <li>• Identify the relationship between the physical hardware and the virtual devices maintained by the operating system [Familiarity]</li> <li>• Explain buffering and describe strategies for implementing it [Familiarity]</li> <li>• Differentiate the mechanisms used in interfacing a range of devices (including hand-held devices, networks, multimedia) to a computer and explain the implications of these for the design of an operating system [Familiarity]</li> <li>• Describe the advantages and disadvantages of direct memory access and discuss the circumstances in which its use is warranted [Familiarity]</li> <li>• Identify the requirements for failure recovery [Familiarity]</li> <li>• Implement a simple device driver for a range of possible devices [Usage]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

<b>Unit 9: File Systems (6)</b>	
<b>Competences Expected:</b>	
<b>Topics</b>	<b>Learning Outcomes</b>
<ul style="list-style-type: none"> <li>• Files: data, metadata, operations, organization, buffering, sequential, nonsequential.</li> <li>• Directories: contents and structure.</li> <li>• File systems: partitioning, mount/unmount, virtual file systems.</li> <li>• Standard implementation techniques</li> <li>• Memory-mapped files</li> <li>• Special-purpose file systems.</li> <li>• Naming, searching, access, backups</li> <li>• Journaling and log-structured file systems</li> </ul>	<ul style="list-style-type: none"> <li>• Describe the choices to be made in designing file systems [Familiarity]</li> <li>• Compare and contrast different approaches to file organization, recognizing the strengths and weaknesses of each [Assessment]</li> <li>• Summarize how hardware developments have led to changes in the priorities for the design and the management of file systems [Familiarity]</li> <li>• Summarize the use of journaling and how log-structured file systems enhance fault tolerance [Familiarity]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

Unit 10: Real Time and Embedded Systems (6)	
Competences Expected:	
Topics	Learning Outcomes
<ul style="list-style-type: none"> <li>• Process and task scheduling</li> <li>• Memory/disk management requirements in a real-time environment</li> <li>• Failures, risks, and recovery.</li> <li>• Special concerns in real-time systems</li> </ul>	<ul style="list-style-type: none"> <li>• Describe what makes a system a real-time system [Familiarity]</li> <li>• Explain the presence of and describe the characteristics of latency in real-time systems [Familiarity]</li> <li>• Summarize special concerns that real-time systems present, including risk, and how these concerns are addressed [Familiarity]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

Unit 11: Fault Tolerance (3)	
Competences Expected:	
Topics	Learning Outcomes
<ul style="list-style-type: none"> <li>• Fundamental concepts: reliable and available systems</li> <li>• Spatial and temporal redundancy</li> <li>• Methods used to implement fault tolerance</li> <li>• Examples of OS mechanisms for detection, recovery, restart to implement fault tolerance, use of these techniques for the OS's own services.</li> </ul>	<ul style="list-style-type: none"> <li>• Explain the relevance of the terms fault tolerance, reliability, and availability [Familiarity]</li> <li>• Outline the range of methods for implementing fault tolerance in an operating system [Familiarity]</li> <li>• Explain how an operating system can continue functioning after a fault occurs [Familiarity]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

Unit 12: System Performance Evaluation (3)	
Competences Expected:	
Topics	Learning Outcomes
<ul style="list-style-type: none"> <li>• Why system performance needs to be evaluated?</li> <li>• What is to be evaluated?</li> <li>• Systems performance policies, e.g., caching, paging, scheduling, memory management, and security</li> <li>• Evaluation models: deterministic, analytic, simulation, or implementation-specific</li> <li>• How to collect evaluation data (profiling and tracing mechanisms)</li> </ul>	<ul style="list-style-type: none"> <li>• Describe the performance measurements used to determine how a system performs [Familiarity]</li> <li>• Explain the main evaluation models used to evaluate a system [Familiarity]</li> </ul>
<b>Readings :</b> [Avi12], [Sta05], [Tan06], [Tan01], [AD14]	

## 8. WORKPLAN

### 8.1 Methodology

Individual and team participation is encouraged to present their ideas, motivating them with additional points in the different stages of the course evaluation.

### 8.2 Theory Sessions

The theory sessions are held in master classes with activities including active learning and roleplay to allow students to internalize the concepts.

### 8.3 Practical Sessions

The practical sessions are held in class where a series of exercises and/or practical concepts are developed through problem solving, problem solving, specific exercises and/or in application contexts.

### 9. EVALUATION SYSTEM

\*\*\*\*\* EVALUATION MISSING \*\*\*\*\*
